## Read Book Ants Insects

Ants are social insects which live in colonies. The colony, also called a formicary, is made up of one or more egg-laying queens and a large amount of female “worker” ants who tend to her, build and maintain the nest, forage for food and care for the young. Male ants have wings and their only function is to mate with the queen. 9.

### **20 Safe Ways to Kill Ants in Your Home Without Toxic Chemicals**

## Read Book Ants Insects

While both carpenter ants and termites can be very destructive to homes, the two species are different because termites eat the wood in which they tunnel, but carpenter ants only nest in it; they do not eat it. So another difference of carpenter ants is the frass (wood dust, soil, and insect parts) that is often found beneath openings to the nest.
