Alzheimer's Disease and Related Dementias | National ...

What is Alzheimer's disease? Alzheimer's disease is an illness of the brain. It causes large numbers of nerve cells in the brain to die. This affects a person's ability to remember things, think clearly, and use good judgment. Doctors don't know what causes the disease. They do know that most of the time it begins after age . 60.

Understanding Alzheimer's Disease

Alzheimer's is a progressive disease, where dementia symptoms gradually worsen over a number of years. In its early stages, memory loss is mild, but with late-stage Alzheimer's, individuals lose the ability to carry on a conversation and respond to their environment. Alzheimer's is the sixth leading cause of death in the United States.
