Vascular malformations, in contrast, are developmental abnormalities of the embryonic vasculature. They develop in utero, typically are evident at birth, in most cases grow proportionately with the patient, and display little or no proliferative activity.

Hemangiomas are vascular tumors characterized by a growth phase, hypercellularity, and endothelial proliferation. Malformations are congenital lesions that are differentiated from hemangiomas on the basis of their normal endothelial cell turnover and lack of excessive proliferation.

vascular system. A vascular anomaly is a localized defect in blood or lymph vessels. These defects are characterized by an increased number of vessels, and vessels that are both enlarged and sinuous. Some vascular anomalies are congenital, others appear within weeks to years after birth, and others are acquired by trauma or during pregnancy. Inher

Vascular anomaly - Wikipedia

A vascular tumor is a tumor of vascular origin; a soft tissue growth that can be either benign or malignant, formed from blood vessels or lymph vessels.

Examples of vascular tumors include hemangiomas, lymphangiomas, hemangioendotheliomas, Kaposi's sarcomas, angiosarcomas, and hemangioblastomas. An angioma refers to any type of benign vascular tumor. Some vascular tumors can be associated with serious blood-clotting disorders, making correct diagnosis critical. A vascular tumor may be described
